Outpatient Clinic Locations
Sensory, movement and/or communication difficulties can affect a child’s ability to learn, to develop age-appropriate skills and to enjoy the normal activities of life. Wolfson Children’s Rehabilitation focuses on addressing these disorders among children – and only children – to help shape futures that are bright and promising.

Wolfson Children’s Rehabilitation offers comprehensive therapies – physical, occupational and speech – for children of all ages. Our experienced therapists provide care planning and treatment tailored to each child’s specific needs. The staff encourages parent and family participation, providing them with the necessary information to be successful in supporting their child’s continued development and recovery.

Therapy initiated in Wolfson Children’s Hospital may be continued at any one of our outpatient clinics.
